Conserving Forests  
Supporting Forest Communities  
Mitigating Climate Change

Carbon Tanzania is a social enterprise that develops, manages and markets our REDD+ projects.

- Forest community land rights
- Development and promotion of good governance
- Respect for community development priorities
- Protection of biodiversity
- Rural employment
- Linking revenue to good land management

Technical support

Land and community rights

Partnerships

DEFORESTATION accounts for 15 - 20% of the world's carbon emissions

80% of Tanzania's carbon emissions are a result of deforestation and land use change.

We cannot tackle global climate change without addressing deforestation

## PREVENTING DEFORESTATION

### Keeping trees in the ground

Forests are a critical resource to both local communities and the global ecosystem. In Tanzania an estimated 70% of the population derive some part of their livelihood from forests.

Carbon, nitrogen, water uplift, ecological diversity...  
a global support system.

Seasonal 'supermarket' of essential  
resources

Ownership of land by these communities and the  
legal right to manage their natural resources is  
the key to preventing deforestation

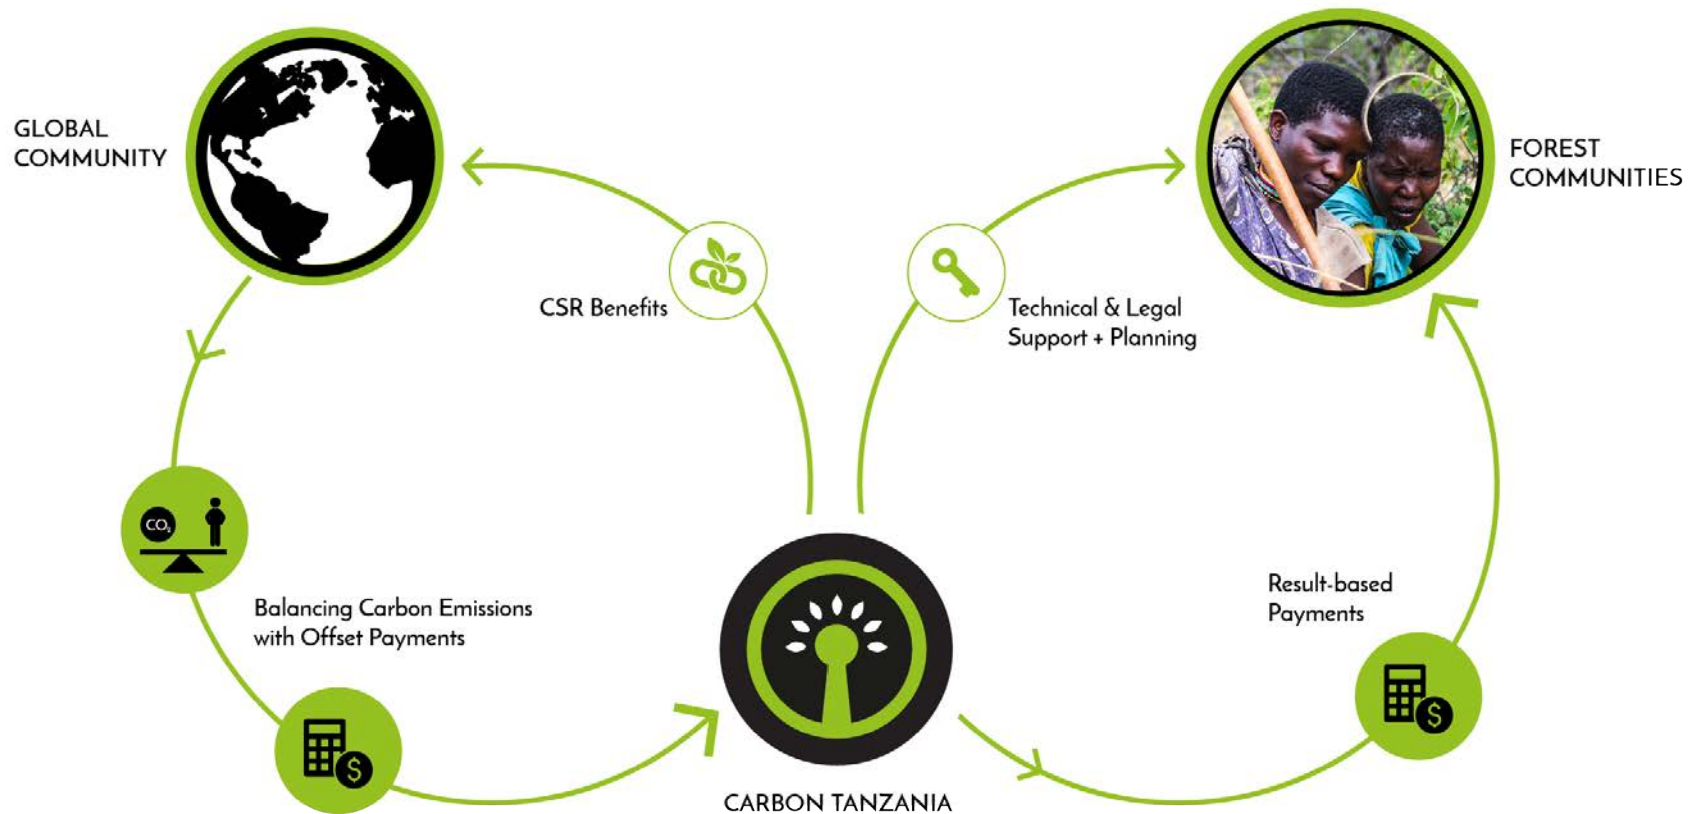

WORKING WITH PEOPLE  
is the key to stopping deforestation and protecting biodiversity

## LINKING FOREST COMMUNITIES WITH THE GLOBAL BUSINESS COMMUNITY

When you offset your carbon emissions – your payment empowers communities to conserve their forest resources and protect their environment.
