GFBC profile

The GFBC is the Cameroon Wood industry body

Its members represent 75% of the turnover of this business sector.

It intends to defend the interests of its members and represent them everywhere it turns out useful.

These last years, the GFBC put a lot to support its members on the way of certification and responsible forest management.
The Project Background

The GFBC initiates the project regarding:

- legality and traceability requirements
- hardness and numerous errors related to manual data recording
- difficulties for its members to justify the origin, even the legality of their supplies

So, it decided to bring sustainable and reliable solutions with the support of EU FAO.
The Project Background

The selection of four wood traders for the experimental phase.

The logging companies have been chosen based on the fact that:

- they were all using an online traceability system named **PALLITRACKS**
  - owing a centralized database
  - web-based system
Timber Traceability and Mobile Technologies

The main objective:

Improve and evaluate timber traceability using mobile technologies by:

► Providing Smartphone applications to record information in the field (even out of range)

► Improving the communication on forestry traceability by connecting the customer with the trader via a website

Logs labelling in FIPCAM at Mfou (Yaounde)
Timber Traceability and Mobile Technologies

Besides, the initiative will allow to constitute a database which will be tipped over in the SIGIF 2 at the time of its deployment.

SIGIF 2 is the government project part of the FLEGT program to centralize all wood traders data to fight against illegal exploitation and secure forestry taxes recovery. Started some few years ago is still under development and is supposed to be completed by the end of this year.

More information on SIGIF Can be found here http://www.minfof.cm/
Project Achievements
Reliable Tool for Managers

From his office, the manager can see on a map view how exploitation goes on

- Where logs are harvested
- The status of every tree along the harvesting process

This is the a simple tool to insure that his employee do not mismanage the forest.

Map previously used in manager offices compared to the online map used thanks to the FAO project
Reliable Tools for Traders

An online application on the GFBC website tracabilite.gfbcam.com and a app in Google play

- to track every tree or log wherever it comes
- to improve the communication on timber legality and origin
  - You can check that a log is harvested within the boundaries of the authorized exploitation
  - You can confirm that traceability is maintain during the exploitation process from inventory to exportation

All labelled logs can be tracked on the project website: tracabilite.gfbcam.com
For EU traders how to check if a log comply with due diligence

Method 1: An online application on the GFBC website tracabilite.gfbcam.com
- Click on “Tracez vos produits bois”
- In the opened window, type down the barre code of the log or the contract number
- Click on “Trouver”

Method 2: On google play
- Search and download “Geo timber” app on an android phone
- Whenever you see a log anywhere in the world with a barre code like the one in illustration
- Scan it and you will see on a map where the original tree was harvested.
Reliable Tools for Costumers

A Mobile application for the customer to select the logs in the timber yard

In real-time, the costumer knows the quantity and volume of the selection

To work in real time implies that traceability is maintain accurately during all the exploitation process
Reliable Tools for employees

- Time saving in the treatment of information
- Data are recorded in the field without internet
- Numerous errors are avoided
Realization after 6 months

- Time saving in data recording
- Better flow management
- Quick access to data
- Trees/logs tracked using web and mobile applications open to the customer

Pallitracks quick reports interface
The do list after 6 months

- Complete the website tracabilite.gfbcam.com
- Correct bugs on all app
- Update involved companies employees with last improvement
- Publish the technical documentation for any company that will like to join the project
Challenges and what next?
Deployment challenges

When deploying the solutions, actors met a challenge:

- Impossibility to have all the park team during training sessions
- Make sure all the 4 involved companies are updated at the same time
Next Step

- Use these tools also to track processed wood
- Widen the project to the other companies of the Cameroon wood industry Body
- Connect the solutions to the national traceability system (SIGIF 2) once it is operational
