Global Forest Risk Assessment

US and EU Market Application & Opportunity

Rick Hilton
SmartSource Manager, USA & Canada
Rainforest Alliance
Risk Assessment Needs

We will ensure that as a minimum, any virgin material in our supply chain comes from legal sources.

It is Kingfisher policy to work with our suppliers of timber and timber-containing products to establish the origin of the wood used. Independently verifiable documentation must be provided.

IKEA minimum requirements on solid wood, veneer, plywood and layer glued wood:
- The origin of the wood must be known
- Wood must be produced in compliance with national and regional forest legislation

Companies undertaking commercial logging (from lands under their control) or primary processing of timber in “high risk” countries will be subject to standard compliance with law representation.

Trade participants will need to make public documented, time-bound commitments to phase out all trade in wood from unknown, illegal and controversial sources within 5 years.
Risk Assessment Challenges

• Need consistent standards
  – Risks, laws differ from country to country, even within each country
  – Industry, governments, NGOs, others have individual goals when setting standards

• Need consistent interpretations
  – Stakeholder groups can interpret standards differently
  – Auditors & assessors interpretation not always consistent

• Avoid frustration for users
  – Technical background
  – Global perspective
  – Multi-stakeholder input

Global Risk Assessment

- Harmonize and ensure consistent approach to risk assessments
- Increase overall transparency
- Utilize the synergies between stakeholders
- Provide a platform for FSC to make and transparently communicate decisions
Lacey & FLEG-T

Legality
Lacey or FLEG-T & Beyond

- Legality
- Traditional & Civil Rights
- HCVF
- Conversion
- GMO Trees

FSC Controlled Wood Risk Assessment
Global Risk Assessment

WELCOME TO THE FSC GLOBAL RISK ASSESSMENT!

This is a free tool providing information about the risk of sourcing controversial wood from more than 150 countries. It is under development by NEPCo in cooperation with the Forest Stewardship Council and the Rainforest Alliance. This tool is especially targeted towards FSC certified companies verifying that they are not sourcing non-FSC certified material from controversial sources. However, it is also useful for other stakeholders of responsible forestry. Many non-certified companies involved in timber trade wish to avoid controversial timber as well and may use this website to evaluate controversial issues within the area they are sourcing from.

We are seeking feedback on this solution. Please browse the other pages using the menu above for more info.

Search for country

Choose risk category

○ All Categories  ○ Traditional and Civil Rights  ○ Conversion
○ Legality  ○ High Conservation Value Forests  ○ GMO Trees

How to use this map

Low risk  Incomplete information  Feedback
Unspecified risk  Not evaluated
Ideas for GRA Phase II

- More complete, accurate information available for all categories
- Districts defined in smaller scale (sub-country level)
- Enable input of any GIS data and map layers (e.g. HCVF mapping initiatives)
- Effective online system for submitting and handling stakeholder proposals
